(54) Title: IMPLANT DEVICE

(57) Abstract: The invention relates to an implant device for bone anchored hearing aids of the type which comprises screw-shaped anchoring (fixture) (1) for anchorage in the bone tissue, an abutment sleeve (2) for skin penetration and arranged to be connected to the fixture (1) by means of a screw connection (3) and a tool (4) for installing the implant into the bone tissue. The fixture (1) and the abutment sleeve (2) are made as a pre-mounted unit which unit is arranged to be installed in one step by means of said tool (4) which is arranged to cooperate with a tool engaging portion (5) on the abutment sleeve (2). By this arrangement there is a less number of pieces to handle for the surgeon during the installation which means that the surgical procedure can be carried out in a more simple and predetermined way, at the same time as the advantages inherent in a two-piece implant device is maintained.
